

StringGear™

INSTRUMENT WORKSTATION

Thank you for purchasing StringGear's Instrument workstation

About your product;

- Easy to use and store your cleaning products in one convenient place.
- Will not scratch furniture or other surfaces, or your favorite instrument.
- Microfiber Suede work surface is the same material used to polish instruments.
- Provides a solid work surface to do general maintenance of stringed instruments.
- Our custom neck rest provides support to all scale instruments.
- Optional neck rest platform enables the use of other neck rest products.
- Waterproof case, with center storage, and built-in neck rest storage.

To use your workstation, unzip the case and remove the stored neck rest from the zipper pouch. Fold the pouch away from the work surface.

Fold back the neck rest and place the neck support on top of the base and in between the neck lift. Insert the 2 brass thumb screws through the neck lift, align with the threaded inserts in the lift support and tighten slightly to support your instrument. Position under your instrument with thumb screws facing you.

Position the rest as needed to accommodate all scale lengths, reverse the rest to get a bit more length for Bass instruments. If you have purchased our model for players who already own a neck rest, position the neck rest base to suite your needs and instrument length. Please note; we are always making improvements, and some photos may appear slightly different, your product may have added features and improvements.

Thank you for purchasing StringGear's instrument workstation, if you have comments, questions or require help please reach us at our support email; support@stringgear.com
